

Abstract

Jana Černá

Optimal and responsible behavior of students and teachers in the school laboratory of dental technicians of Medical College and High School and the College in Prague 1

Faculty of Education at Charles University, Bachelor's combined study

Practical Education and Professional Training

Vedoucí práce: Dr.. Hanušová Jaroslava, Ph.D.

I chose the topic of safety in school laboratories. My goal was to identify current knowledge of students and teachers about safety and protection, their health and conditions at work. After this investigation, a new set up is presented so that the working conditions and safety at work were satisfactory both in terms of security, personnel and humane. I chose the topic because I am not satisfied with the current situation. I want to see if there is an error in setting conditions or in ignorance of all concerned, or in disrespect and subsequently in existing non-compliance. I am applying survey method and after processing the data I will analyse the results and draw conclusions that lead to setting up
